

Sterilisation is a necessary and accepted part of infection prevention standards and clinic workflow, so you don't always think about the financial impact of these procedures and protocols...

is it time to think twice and use once?

Making the switch to sterile, single-use products could offer you the following benefits:

TIP: The ADA and BDA recommend the use of sterile single use instruments whenever feasible as an alternative to reprocessing reusable items, particularly where cleaning is difficult.

EFFECTIVE

Reduced risk of infection

Reduced risk of staff injury

Increased traceability standards

Precision made, high quality and reliable

Increases infection control protocol compliance

ECONOMICAL

Reduced labor costs

Reduced the amount of cleaning and reprocessing

Reduced sterilisation requirements

Reduced wastage - only order what you need

Reduced consumables

Reduced capital expense

Easier to identify costs per procedure

Prices start from \$1 US per instrument

EFFICIENT

Reduced reprocessing bottleneck

Offers a solution if your autoclave breaks down

No supply shortages

Sharp every time

Ready to go - pre-packaged and sterilised

Handy bench-top dispenser

Different configurations available for each dentist or procedure
